15 guaranteed specs. More than anyone else.

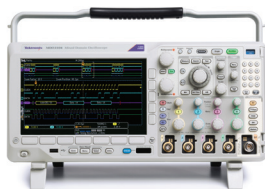

Every MDO3000 and MDO4000C scope provides measurements based on actual acquisition data and as close to measurement algorithms as possible. Other scopes use lower-resolution display data, which can lead to inaccurate measurements prone to change with zoom settings.

True Spectrum Analysis.

Unlike other oscilloscopes that offer FFT "spectrum analysis", only the MDO series has a true spectrum analyzer, enabling you to perform RF measurements up to 6 GHz without having to leave the comfort of your scope.
